What Is Astra?

Astra is a lightweight, fully responsive WordPress theme that offers a wide range of pre designed starter sites. Built with speed and SEO in mind, Astra delivers a clean codebase that allows developers and beginners alike to create professional websites quickly. Its modular architecture means you can enable or disable features as needed, keeping your site lean.

Key strengths of Astra include:

- Speed: Minimal bloat and optimized CSS/JS result in fast load times.
- Flexibility: Extensive theme options and page builder compatibility.
- Accessibility: WCAG 2.1 compliant, making your site inclusive.
- Developer Friendly: Clean hooks, filters, and child theme support.
- SEO Ready: Schema markup, clean URLs, and schema support out of the box.

With the Astra **manual user guide**in hand, you'll be equipped to harness these features and take your site to the next level.

Installing the Astra Theme

Getting started is straightforward. Below are the steps for installing Astra via the WordPress dashboard, as well as a quick note on installing via FTP for advanced users.

Installing Through the WordPress Dashboard

1. Log in to your WordPress admin area.
2. Navigate to Appearance > Themes.
3. Click Add New and search for “Astra.”
4. When the preview appears, click Install, then Activate.

Installing via FTP (for advanced users)

1. Download the latest Astra theme ZIP file from wpastra.com.
2. Extract the ZIP file on your computer.
3. Upload the extracted folder to /wp-content/themes/ using an FTP client.
4. Go to Appearance > Themes in the dashboard and activate Astra.

Initial Setup with the Astra Starter Sites

After activation, you’ll see a prompt to import a starter site. These are pre designed websites that can be imported in one click and serve as a solid foundation.

1. Click Import Starter Site.
2. Choose a site that matches your niche (e.g., business, portfolio, blog).
3. Click Import and wait for the process to finish.

Once the import is complete, your site will have a fully functional layout, ready for content creation.

Exploring the Theme Options Panel

The Astra theme options panel is the heart of customization. Accessible via **Appearance > Astra Options**, it offers a wide array of settings that let you fine tune every aspect of your site without touching code.

General Settings

- Site Layout: Choose between boxed or full width layouts.
- Container Width: Set custom widths for desktop, tablet, and mobile.
- Typography: Pick fonts, sizes, and line heights for headings and body text.
- Colors: Define primary, secondary, and background colors.
- Background: Add image, gradient, or color backgrounds.

Header Settings

Here you can configure the header’s structure, including logo placement, navigation style, and header height. Astra’s header builder allows you to drag and drop elements like menus, search bars, and call to action buttons.

Footer Settings

Customize your footer’s column count, widgets, and copyright text. You can also enable a footer bar with social icons and custom links.

Blog Settings

- Blog Layout: Choose grid, list, or full width layouts.
- Post Meta: Toggle author, date, categories, and tags.
- Excerpt Length: Set the number of words for the post preview.

WooCommerce Settings

If you run an online store, Astra offers dedicated WooCommerce settings. Here you can adjust product page layouts, catalog view, and add quick view or add to cart buttons.

Accessibility & SEO

- Skip Links: Add skip links for improved keyboard navigation.
- Schema Markup: Enable JSON LD schema for posts, products, and more.
- AMP Compatibility: Toggle AMP support for mobile friendly pages.

Customizing the Header with Astra Header Builder

The Astra Header Builder is a powerful, drag and drop interface that lets you create unique header layouts. You can choose from several header types: **Default**, **Transparent**, **Sticky**, and **Mobile**. Below is a step by step guide to creating a custom header.

Step 1: Open the Header Builder

1. Go to Appearance > Astra Header Builder.
2. Select the header you want to edit (e.g., Default).

Step 2: Add Elements

- Drag elements from the left panel to the header canvas.
- Common elements include: Logo, Primary Menu, Search, Cart, Social Icons, and Custom Buttons.

Step 3: Configure Element Settings

Click on an element to open its settings panel. Here you can:

- Logo: Upload an image, set dimensions, or use a text logo.
- Menu: Choose a menu location, style, and alignment.
- Search: Toggle placeholder text and icon visibility.
- Cart: Enable mini cart dropdown and update cart icon.
- Social Icons: Add links, icons, and hover effects.
- Buttons: Create CTA buttons with custom colors and links.

Step 4: Adjust Responsiveness

Use the preview window to switch between desktop, tablet, and mobile views. Adjust element visibility and layout for each breakpoint to ensure a smooth experience across devices.

Step 5: Publish

Once satisfied, click **Save** and preview your site. Your new header will be live instantly.

Seamless Integration with Page Builders

Astra is designed to work flawlessly with the most popular WordPress page builders: Elementor, Beaver Builder, Gutenberg, and Divi. Each integration offers a set of pre built sections and blocks that can be dropped into any page.

Elementor Integration

- Install the Astra Starter Templates plugin.
- Open the Elementor editor and click Import Template.
- Select from a library of Astra ready templates and insert them into your page.

Beaver Builder Integration

1. Activate the Astra Starter Templates plugin.
2. Open the Beaver Builder editor and choose Import Template.
3. Select a template and add it to your page.

Gutenberg (Block Editor) Integration

Astra includes a set of custom Gutenberg blocks, such as:

- Call to Action
- Feature List
- Pricing Table
- Team Member
- Testimonials

These blocks can be inserted directly into the Gutenberg editor and customized via block settings.

Divi Integration

While Divi is a standalone theme, you can still use Astra for the core layout and switch to Divi's visual builder for specific pages.

Optimizing Performance and SEO

Speed and search engine visibility are critical for user experience and rankings. Astra provides several built in options to help you optimize both.

1. Enable Lightweight Mode

Under **Appearance > Astra Options > General Settings**, toggle **Lightweight Mode**. This disables unnecessary scripts and styles, reducing page size.

2. Minify CSS and JavaScript

Use a plugin like **Autoptimize** or **WP Rocket**to minify and combine CSS/JS files. Astra's clean codebase works well with these optimizers.

3. Leverage Browser Caching

Set caching rules in your hosting control panel or through a caching plugin. This speeds up repeat visits and reduces server load.

4. Optimize Images

- Compress images with Imagify or ShortPixel.
- Use WebP format for modern browsers.
- Lazy load images to defer off screen loading.

5. Implement Schema Markup

Astra automatically adds JSON LD schema for posts, products, and more. To enhance this, add custom schema via the **Schema Pro** plugin or custom code in your child theme.

6. Mobile Optimization
