- Add Doors and Windows: Drag and drop from the object library, or use the “Door” and “Window” tools for custom placements.
- Apply Materials: Open the Material Editor and apply textures, colors, or reflectivity settings to surfaces.
- Set Lighting: Add natural light, spotlights, or ambient lighting to enhance realism.
- Render a Preview: Press the “Render” button to generate a high quality image or animation.

Utilising the Object Library

The built in library contains over 10,000 objects ranging from simple furniture to complex architectural details. To use an object:

1. Open the “Object Library” panel.
2. Browse or search for the desired item.
3. Drag the object into your scene and adjust its size, rotation, and position.

Custom objects can also be imported in formats such as OBJ or FBX.

Advanced Features: Rendering and Animation

Avanquest Architect 3D Ultimate 2017 offers two primary rendering modes: **Real Time** and **Ray Tracing**. The real‑time mode provides quick previews, while ray tracing produces the most photorealistic results.

- Render Settings: Adjust resolution, anti‑aliasing, and global illumination parameters to balance quality and rendering time.
- Material Enhancements: Use bump maps, normal maps, and reflective properties to give surfaces a lifelike feel.
- Animation Tools: Create camera paths, object animations, and even simulate natural phenomena such as wind or water.
- Export Options: Rendered images can be exported in JPEG, PNG, or TIFF formats. Animations are available in MP4 or AVI.

Tips for Faster Rendering

1. Reduce the number of high‑detail objects in the scene.
2. Use lower resolution textures for background elements.
3. Enable “Render Layers” to isolate complex areas and render them separately.
4. Take advantage of GPU acceleration if your graphics card supports it.
